

STAR WARS SPECIES HUMAN-SCALE ATLAS

46 campaign species / races - web imagery + normalized 1.80 m human scale

Scope follows the campaign's canonical installed Star Wars race inventory, with Human, Hutt and Gamorrean included for practical casting. Priority order: official orthographic / production turnaround; full-body reference art; character exemplar; portrait fallback. Every species page includes a normalized scale strip so portrait-only source art does not imply false proportions.

IMPORTANT: The web image is a morphology/reference image, not necessarily drawn to metric scale. The diagram on each page is the proportional comparison. Height ranges are heterogeneous secondary-reference data and should be treated as approximate when canon does not publish a species-wide standard.

How to read this atlas

TURNAROUND	Best evidence. Front / side / rear or multi-angle production sheet. Twi'lek and Rodian entries use official Lucasfilm/StarWars.com sheets.
FULL BODY	Next-best visual evidence. Useful for silhouette, limb proportions, posture and costume envelope.
PORTRAIT / PARTIAL	Used only where better full-body reference was not readily sourceable. Never use the crop itself to infer height.
SCALE STRIP	Actual comparison device: a 1.80 m human against the representative midpoint or exemplar height.
HUTT EXCEPTION	For Hutts, vertical height is misleading. The source profile also gives Jabba's ~3.9 m body length.
SITH PUREBLOOD GAP	No sufficiently sourceable full-body web asset was captured in the download pass; the page is retained as a scale/reference flag rather than silently substituting another species.

Human

comparison standard: 1.80 m

VISUAL SOURCE

Programmatic scale reference

VIEWS / QUALITY

Baseline comparison, not a species-art source.

HEIGHT / SCALE BASIS

comparison standard: 1.80 m

NORMALIZED SCALE STRIP

Geometric comparison; source art is not itself rescaled.

Scale diagram uses representative midpoint/exemplar; species ranges can be broad and sexual dimorphism/caste differences may matter.
